Adminer (formerly phpMinAdmin) is a full-featured database management tool written in PHP. Conversely to [phpMyAdmin](#), it consist of a single file ready to deploy to the target server. Adminer is available for MySQL, PostgreSQL, SQLite, MS SQL, Oracle, Firebird, SimpleDB, Elasticsearch and MongoDB.

See: [Features](#), [Requirements](#), [Skins](#), [References](#)

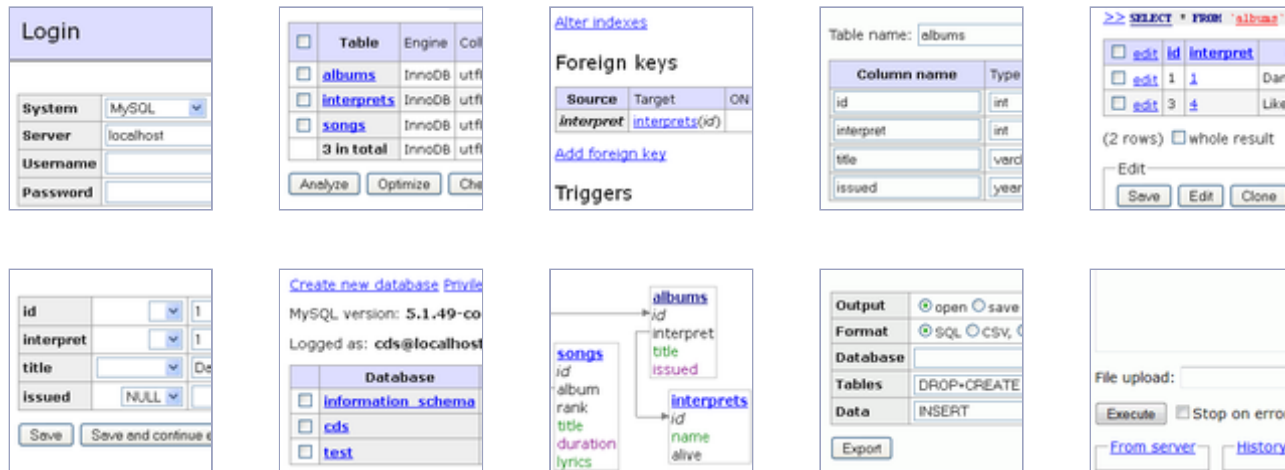

Why is Adminer better than phpMyAdmin?

Replace **phpMyAdmin** with **Adminer** and you will get a tidier user interface, better support for MySQL features, higher performance and more security. [See detailed comparison](#).

Adminer development priorities are: 1. Security, 2. User experience, 3. Performance, 4. Feature set, 5. Size.

Features

- **Connect** to a database server with username and password
- Select an existing **database** or create a new one
- List fields, indexes, foreign keys and triggers of table
- Change name, engine, collation, auto_increment and comment of **table**
- Alter name, type, collation, comment and default values of **columns**

- Add and drop tables and columns
- Create, alter, drop and search by **indexes** including fulltext
- Create, alter, drop and link lists by **foreign keys**
- Create, alter, drop and select from **views**
- Create, alter, drop and call **stored procedures and functions**
- Create, alter and drop **triggers**
- **List data** in tables with search, aggregate, sort and limit results
- Insert new **records**, update and delete the existing ones
- Supports all **data types**, blobs through file transfer
- Execute any **SQL command** from a text field or a file
- **Export** table structure, data, views, routines, databases to SQL or CSV
- Print **database schema** connected by foreign keys
- Show **processes** and kill them
- Display **users and rights** and change them
- Display **variables** with links to documentation
- Manage **events** and **table partitions** (MySQL 5.1)
- Schemas, sequences, user types (PostgreSQL)
- **Extensive customization options**

Requirements

- Works with MySQL, PostgreSQL, SQLite, MS SQL, Oracle, SimpleDB, Elasticsearch, MongoDB - **Improve your driver**
- Supports PHP 5 with enabled sessions
- Available in many languages including Chinese **(36)** - **Create a new translation**
- Free for commercial and non-commercial use (**Apache License** or **GPL 2**)
