DDoS-PHP-Script

Script to perform a DDoS UDP flood by PHP

Usage

From web server (visit the page):

```
http://127.0.0.1/ddos.php?pass=apple&host=TARGET&port=PORT&time=SECONDS&packet=NUMBER&bytes=NUMBER
```

From terminal:

```
php ./ddos.php host=TARGET port=PORT time=SECONDS packet=NUMBER bytes=NUMBER
```

Parameters

```
help    Print this help summary page
host    REQUIRED specify IP or HOSTNAME
pass    REQUIRED only if used from webserver
port    OPTIONAL if not specified a random ports will be selected
time    OPTIONAL seconds to keep the DDoS alive, required if packet is not used
packet  OPTIONAL number of packets to send to the target, required if time is not used
bytes   OPTIONAL size of the packet to send, defualt: 65000
format  OPTIONAL output format, (text,json,xml), default: text
output  OPTIONAL logfile, save the output to file
verbose OPTIONAL 0: debug, 1:info, 2:notice, 3:warning, 4:error, default: info

Note:   If both time and packet are specified, only time will be used
```

Requirements

- PHP 5.4 version or greater

To-Do List

- Introduce a logging function to file

Credits

- Andrea Draghetti is the creator of the project

Special thanks:

- @TheZer0 to support for coding.
- @Smaury to support for coding.
- @moty66 to support for coding.
- @AxissXs to support for coding.
